Certificate of Appropriateness Placard
for Raleigh Historic Resources

11 S BLOUNT STREET
Address
CAPITOL SQUARE
Historic District
HORTON-BRETSCH
Historic Property
167-16-MW
Certificate Number
10-18-2016
Date of Issue
04-18-2017
Expiration Date

Project Description:

- Install access card reader on rear door;
- Install mailbox.

This card must be kept posted in a location within public view until all phases of the described project are complete. The work must conform with the code of the City of Raleigh and laws of the state of North Carolina. When your project is complete, you are required to ask for a final zoning inspection in a historic district area. Telephone the RHDC office at 832-7238 and commission staff will coordinate the inspection with the Inspections Department. If you do not call for this final inspection, your Certificate of Appropriateness is null and void.

Minor Work Approval (office use only)

Upon being signed and dated below by the Planning Director or designee, this application becomes the Minor Work Certificate of Appropriateness. It is valid until 4/14/17. Please post the enclosed piacard form of the certificate as indicated at the bottom of the card. Issuance of a Minor Work Certificate shall not relieve the applicant, contractor, tenant, or property owner from obtaining any other permit required by City Code or any law. Minor Works are subject to an appeals period of 30 days from the date of approval.

PAGE 3 OF 3
1. Installation of access card reader at rear door of house to monitor and control ingress/egress to the house.

The proposed location of the access card reader is the exterior wall at the rear of the building immediately to the left of the door handle. The reader is black in color and measures 2.5” x 3.5”. Installation requires one small hole approximately 3/8 inches in diameter to thread wires to the reader, and the reader cannot be seen from Blount Street. This is not a permanent fixture; it can easily be removed at the end of Campbell’s lease and the hole filled and painted to restore the exterior wall to its original condition.

Attached are a picture of the reader and a photograph of the rear of the building indicating the location of the reader.

2. Installation of lockable 14” x 10” mailbox on the inside of the front porch rail.

The proposed mailbox is a lockable 14” x 10” white metal mailbox that we propose to install on the inside of the front porch rail that is perpendicular to the front façade. It will be screened by the main porch post on the left (when facing the house main entrance) and by the shrubbery at the porch, so it will not be visible from Blount Street but will be easily accessible by the post office and residents. It will be mounted with two (2) screws into the porch rail, and the resulting small holes can be filled and painted to restore the rail to its original condition when the mailbox is removed.

See attached pictures showing the mailbox and its location on the porch rail.
multiCLASS
RP15, RP40 and
RPK40 Readers

13.56 MHz Contactless and 125 KHz Proximity Card Readers • 6125, 6136, 6145

- Simple Migration – From the most popular proximity technologies to iCLASS™.
- GSA-approved – Included in the U.S. General Services Administration (GSA) FIPS 201 Approved Products List.
- Dual Factor Authentication (RPK40 only) – Combine contactless card presentation with a PIN.

The multiCLASS™ family of card readers is designed for customers upgrading their current card system from the most popular proximity technologies to iCLASS™ credentials. With the RP40, RPK40 and RP15 readers, the customer has the ability to transition to smart cards over time while incorporating the use of multiple card technologies within a single building or across multiple facilities.

The multiCLASS reader line provides enhanced security through mutual authentication and data encryption. HID, Indala and other popular proximity technologies are supported by multiCLASS. Save on system configuration costs by keeping system upgrade simple. Whether reading proximity, iCLASS or multi-technology cards, identical user identification data formats are sent to the panel. Unlike competitor products, HID multiCLASS readers support all HID and Indala Proximity formats, including Corporate 1000, long and FlexSecure.

Only the multiCLASS family of products provides true iCLASS security, the ease of proximity technology, the power of smart cards and the confidence of choosing HID, the worldwide leader in access control.

Unique Read Selection
- Enable iCLASS, proximity or both technologies at the same time.
- Multiple data outputs available when multi-technology card is presented depending on preference.
- Configuration cards configure the reader to custom installation requirements.
- Reads: 125 kHz – HID, Indala or AWID Proximity; 13.56 MHz – iCLASS, ISO 15693 CSN (Myo,ICODE, Tag-it), ISO 14443A CSN (MIFARE*, DESFire™), US Government PIV, ISO 14443B CSN, FeliCa™ IDm, CEPAS CAN or CSN

Seamless Upgrade
- Same HID and Indala Proximity reader features and format compatibilities.
- Matching Reader and Credential formats for EM4102 and iCLASS.
- Same wiring, power and interface as many popular proximity readers in the market today.
- All Corporate 1000 formats can be migrated.
- For additional security, our iCLASS Elite program is available with iCLASS credentials.
- Wiegand or Clock-and-Data outputs easily interface with existing access control panels.
- The RPK40 combines a contactless card presentation with a personal identification number (PIN) to support dual factor authentication of identity.
- The RP15 is a flush form factor drop-in replacement for the HID MiniProx.

RE: Application for COA - Access Card Reader and Mailbox
    Campbell Community Law Clinic
    Horton-Beckham-Bretsch House - 11 South Blount Street

Dear Tania and Martha:

Attached is Campbell Law School’s application for a COA for an access card reader and mailbox for the Horton-Beckham-Bretsch House at 11 South Blount Street.

Please let me know if you have any questions or need more information. Thank you for your consideration of these requests.

Sincerely,

[Signature]

Linda Davenport
Facility Manager

Ld
Enclosures
Good morning,

Attached is the information you requested to complete the Application for Minor Work COA at 11 S. Blount Street.

1. Higher quality site plan showing the building at the corner of South Blount and East Morgan and highlighting the proposed location of the mailbox.
2. Revision of the detailed description of the proposed card reader at the rear door of the house to include information on small modification to interior of door frame.

Thank you for your assistance in this matter, and please let me know if you need any more information or have any questions.

Linda

Linda: Thank you for submitting a Minor Work application for 11 S Blount St. I’ve reviewed the application and I have a few comments. Additional materials may be sent in by email.

- Please provide a higher quality site plan.
- Please indicate if you intend to modify the door for which the card reader will be installed.

Thanks,

John
Horton-Beckham-Bretsch Description of Work
Certificate of Appropriateness Application
September 29, 2016

1. Installation of access card reader at rear door of house to monitor and control ingress/egress to the house.

   The proposed location of the access card reader is the exterior wall at the rear of the building immediately to the left of the door handle. The reader is black in color and measures 2.5” x 3.5”. Installation requires one small hole approximately 3/8 inches in diameter to thread wires to the reader and the reader cannot be seen from Blount Street. This is not a permanent fixture, as it can easily be removed at the end of Campbell’s lease and the hole filled and painted to restore the exterior wall to its original condition.

   The door for which the reader is installed will not be modified. We will install a small electric strike on the inside of the frame adjacent to the door handle. The small strike cannot be seen when the door is closed. This also is not a permanent fixture. It can easily be removed and the frame restored to its original condition.

   The Horton-Beckham-Bretsch House Raleigh Historic Landmark Report indicates that the small shed-roof addition of which the rear door is a part was constructed in 1982 when the house was moved from 111 N. McDowell Street to 11 South Blount Street. The rear door and frame is a modern residential fixture that was installed by the owner in 2015.

   Attached are a picture of the reader and a photograph of the rear of the building indicating the location of the reader.

2. Installation of lockable 14” x 10” mailbox on the inside of the front porch rail.

   The proposed mailbox is a lockable 14” x 10” white metal mailbox that we propose to install on the inside of the front porch rail that is perpendicular to the front façade. It will be screened by the main porch post on the left (when facing the house main entrance) and by the shrubbery at the porch, so it will not be visible from Blount Street but will be easily accessible by the post office and residents. It will be mounted with
two (2) screws into the porch rail, and the resulting small holes can be filled and painted to restore the rail to its original condition when the mailbox is removed.

See attached pictures showing the mailbox and its location on the porch rail.
