Nature of Project:
Construct house and garage; install fence

*Address subdivision has not been recorded.

APPLICANT:
NICK MEEKER
APPLICATION FOR A CERTIFICATE OF APPROPRIATENESS – STAFF REPORT

COA-0068-2019 1204 E LANE STREET
Applicant: NICHOLAS MEEKER
Received: 06/12/2019 Meeting Date(s):
Submission date + 90 days: 09/10/2019 1) 07/25/2019 2) 3)

INTRODUCTION TO THE APPLICATION

Raleigh Historic Landmark: Lemuel & Julia Delany House
Nature of Project: Construct house with deck; construct garage; install driveway and fence; remove two trees, plant two trees; renew COA for garage demolition

DRAC: A pre-application design was reviewed by the Design Review Advisory Committee at its June 3, 2019 meeting. Members in attendance were Dan Becker, Sarah David, and Jenny Harper; also present were Nick Meeker, Vince DeFreitas, Tyler Chestnutt, Collette Kinane, Melissa Robb, and Tania Tully.

Staff Notes:
• Unified Development Code section 10.2.15.E.1 provides that “An application for a certificate of appropriateness authorizing the demolition or destruction of a building, structure or site within any Historic Overlay District…may not be denied…. However, the authorization date of such a certificate may be delayed for a period of up to 365 days from the date of issuance…. If the Commission finds that the building, structure or site has no particular significance or value toward maintaining the character of the Historic Overlay District or Historic Landmark, it shall waive all or part of such period and authorize earlier demolition or removal.”
• Previous COA cases are available for review.
• The boundary of the landmark designation includes three lots; one with the historic house (210 N State Street) and two vacant parcels (1204 E Lane Street and 212 N State Street)

STAFF REPORT

Based on the information contained in the application and staff’s evaluation:
A. Installation of a driveway and fence, removal of two trees, planting two trees, and renewal COA are not incongruous in concept according to Guidelines 1.3.7, 1.3.13, 1.4.8, 1.4.11, 1.5.1, 1.5.3, 1.5.5, 1.5.6; however, the removal of two healthy trees may be incongruous according to Guidelines 1.3.1, 1.3.5, 1.3.6, and the following suggested facts:

1* The demolition of the existing garage was approved with COA 133-16-CA. Open conditions remain to be met prior to issuance of a blue placard and demolition permit (see attached staff evidence.) Renewals of expired approved COA applications are classified as minor work. This item has been included here for administrative efficiency.

2* Two trees are proposed for removal; a 14” DBH cedar and a 19” DBH birch, both of which are in the footprint of the proposed house and garage.

3* A 26” DBH oak is outside the property boundaries to the south on the 212 N State St property. The critical root zone was not shown on the proposed plot plan, but would cross onto the subject property. A tree protection plan prepared by an arborist certified by the International Society of Arboriculture (ISA) or a NC-licensed landscape architect for the oak tree was not provided.

4* Two replacement trees are proposed to be planted on the property, with one in the front yard and one in the rear yard; however, the tree species was not provided for either tree.

5* The new house is oriented to face E Lane St with a garage in the southeast corner of the lot and a driveway leading to it from the street. There is no indication what material or finish has been proposed for the driveway; a water-washed finish is historically appropriate for concrete driveways.

6* A walkway is shown leading from the driveway to the front porch steps. This is an atypical arrangement for historic properties like the Delany House where the front walkway leads directly from the sidewalk to the front steps.

7* The application includes the installation of a 6’ wood fence and gate to enclose the rear yard. Photographs of the proposed design are included; however, the exact location and finish color of the fence and gate were not provided.

8* The committee has regularly found that 6’-tall wood privacy fences meet the Design Guidelines when installed in rear and side yards (except for corner lots). Traditionally, fences were constructed with neighbor friendly design, with structural members facing inward; the proposed fence designs have the same appearance on each side.
B. Construction of a house with deck is not incongruous in concept according to *Guidelines* 1.3.2, 1.3.7, 1.3.8, 3.3.1, 3.3.2, 3.3.4, 3.3.5, 3.3.6, 3.3.7, 3.3.8, 3.3.9, 3.3.10, 3.3.11, 3.3.12, and the following suggested facts:

1* As shown in the application, the property is on the northeast corner of the Lemuel & Julia Delany House property (210 and 212 N State Street) which was previously subdivided but has not been recorded with Wake County. The Delany House landmark boundaries were not affected by the newly configured property lines; thus, this new address is still part of the landmark property.

2* Unified Development Ordinance 5.4.1.E.1. states that “The minimum and maximum setbacks...for Historic Landmarks...shall be congruous with the setbacks of any typical well-related nearby building and structure within 1½ blocks...and congruous with the character of the Historic Landmark...” The *Design Guidelines* defines well-related nearby buildings as “Existing contributing buildings within 1-½ blocks of the subject property as measured parallel to the building-wall line in both directions and on both side streets.”

3* According to the proposed plot plan in the application the proposed setback of the house is 19’. The front porch is approximately 12’ from the sidewalk. The Delany House fronts on N State Street and is setback from E Lane St approximately 6.6’.

4* **Built area to open space analysis:** According to the applicant, the built area which includes the house, deck, porches, driveway and garage is proposed to be 64.2%. As subdivided, the Delany House built area will be 42.4%. The nearby Weaver House, another historic landmark has a built area of 36.7%. It is unclear if the Delany House calculation includes the surface area of the large paved area at the rear of the house.

5* **Built mass to open space analysis:** No analysis of built mass was provided by the applicant, nor was any analysis of the existing built mass of properties in the immediate neighborhood provided. Compared to the built area above, the built mass to open space ratio would be slightly less with only the driveway and front walk removed from consideration.

6* The applicant proposes constructing a two-story house with porches in the front and rear as well as a rear deck.

7* The roof ridge appears to be roughly 26’ and is higher than the nearby Delany House as shown in an elevation drawing on page 12 of the application. The roof ridge on the new
The house appears to be approximately 3’ higher than the Delany House which is a 1 ½ story residence.

8* The application includes two pages labeled Building Comparisons that shows elements from both the Delany House and the Weaver House across the street that served as references for the development of the proposed design.

9* The proposed house has a long rectangular form with a clipped gable in the front and hipped roof in the rear. From the front, the house appears to have side dormers. These extend to become a hip which masks the shallow pitch of the rear portion of the roof.

10* The front porch is shown to have a hip roof from the front and a gable on the side. A hipped roof is compatible with the proposed roof of the house.

11* The house is proposed to be clad with painted smooth-faced fiber cement siding with an 8” exposure which is deeper than the 5-7” exposure typical of historic houses.

12* Trim is proposed to be a painted composite material with a smooth finish.

13* Brick is proposed for the foundation and for the column bases on the front porch. A sample board was provided for Lee Brick #740 Scottsdale. The sample brick has a deliberately aged and damaged appearance which is atypical for new construction. The Delany House has a painted foundation.

14* Material specifications were not provided for the front porch floor and ceiling or asphalt shingle roofing.

15* Double-hung windows appear to be primarily vertically-oriented units of four sizes. The right/west façade includes two units which appear to be fixed windows.

16* The application states the windows will be wood or aluminum-clad wood windows. The Committee has previously determined that aluminum-clad wood windows with certain characteristics meet the Guidelines for new construction. Window specifications were not provided.

17* The window trim is shown to be in a modern picture frame configuration. Historically windows would have trim on three sides with a sill at the bottom.

18* The front door is proposed to be a one-lite over a panel unit surrounded by sidelights and a transom. The rear includes a single-lite unit on the ground floor and a pair of 18-lite French doors on the second floor. Door specifications were not provided.
19* A wood deck is proposed at the rear of the house. The location is typical and will not be visible. Neither deck stain color samples nor detailed drawings of the deck railing were provided.

20* The eaves will have an enclosed sloped soffit. Neither the materials nor construction details were provided.

21* The application states that materials will be painted. Paint samples were provided.

22* Exterior lighting was not shown on the drawings, nor were specifications provided.

23* Neither locations nor specifications were provided for gutters and downspouts.

C. Construction of a garage is not incongruous in concept according to Guidelines 1.6.6, 1.6.7, 1.6.8, and the following suggested facts:

1* The proposed garage is a single-story single-car size. Complete side elevations were not provided.

2* The gable front building is oriented towards E Lane Street, sited at the rear of the lot, and at the end of the driveway.

3* Exterior materials for the garage will match the house.

4* The drawings appear to show both a vehicular door on the front of the garage and a person door on the left/west side. Door specifications were not provided.

Staff suggests that the committee approve the application with the following conditions:

1. That there be no demolition delay for the removal of the trees.

2. That a tree protection plan be implemented and remain in place for the duration of construction.

3. That the driveway have a water-washed finish.

4. That there be a front walkway that leads directly from the sidewalk to the front steps.

5. That the smooth-faced fiber cement siding have a 5-7” exposure.

6. That the brick used in the foundation and column bases on the front porch be a less distressed style or be painted.

7. That details and specifications for the following be provided to and approved by staff prior to issuance of the blue placard for the house:
a. Tree protection plan prepared by an arborist certified by the International Society of Arboriculture (ISA) or a NC-licensed landscape architect;

b. Manufacturer’s specifications for windows, showing both section and elevation views, muntin profiles and material descriptions;

8. That detailed drawings and/or specifications for the following be provided to and approved by staff prior to installation or construction for the **house**:
   a. Species and size details for new trees;
   b. Location and finish color of the fence and gate;
   c. Roof material;
   d. Front porch including the roof, floor, ceiling, pier and columns;
   e. Trim at windows and doors including a sill detail on the windows;
   f. Brick specifications/sample for the color, size and bond pattern;
   g. Doors, showing both section and elevation views, muntin profiles and material descriptions;
   h. Deck railings showing both elevation and section views;
   i. Eave/soffit construction;
   j. Exterior lighting including locations on the building;
   k. Finish specifications for the gutters and downspouts, and location on the building shown on elevation drawings.

9. That the conditions for the garage demolition for COA 133-16-CA remain in effect and must be met prior to the issuance of the blue placard for the garage.

10. That details and specifications for the following be provided to and approved by staff prior to issuance of the blue placard for the **garage**:
    a. Tree protection plan prepared by an arborist certified by the International Society of Arboriculture (ISA) or a NC-licensed landscape architect;
    b. Manufacturer’s specifications for windows, showing both section and elevation views, muntin profiles and material descriptions;
    c. Side elevations.

11. That details and specifications for the following be provided to and approved by staff prior construction of the **garage**:
    a. Roof material;
b. Trim at windows and doors;
c. Brick specifications/sample for the color, size and bond pattern;
d. Doors, showing both section and elevation views, muntin profiles and material descriptions;
e. Eave/soffit construction;
f. Exterior lighting including locations on the building;
g. Finish specifications for the gutters and downspouts, and location on the building shown on elevation drawings.

Minor Work Approval (office use only)
Upon being signed and dated below by the Planning Director or designee, this application becomes the Minor Work Certificate of Appropriateness. It is valid until ___________.

Please post the enclosed placard form of the certificate as indicated at the bottom of the card. Issuance of a Minor Work Certificate shall not relieve the applicant, contractor, tenant, or property owner from obtaining any other permit required by City Code or any law. Minor Works are subject to an appeals period of 30 days from the date of approval.

Minor Work

Demolition of Detached Garage

This application requests for the removal of the existing garage on the newly recorded lot, formerly the property of the Delany House. This work was already approved in COA 133-16-CA. As this is a renewal of a formerly approved, but expired COA, this is classified as Minor Work.

From Article XV – Certificate of Appropriateness List:

- Garage Removal – The LD report mentions, Behind the house, at the northeast corner of the lot, stands a ca 1940 single-car garage of painted cinder block construction with an asphalt-shingled gable roof and plywood sheathing in the gables. Extending to the rear is an original shed-roofed chicken house with low windows and a panel door. The LD report does not detail how or why this garage is significant and it was not a part of the original house. It is in disrepair and is to be removed.
Major Work

New Construction – Residential

This application requests the approval of a new residential house to be constructed on the newly recorded lot of 1204 East Lane Street, formerly the property of the Delany House. As the property is a subdivision of a historic landmark, it is understood that the approval will be based its proximity to the Lemuel And Julia Delany House (1917). In addition, the David And Ernestine Weaver House is a historic landmark built in the similar timeframe (1922) directly across the street at 1203 E Lane Street. Therefore, the Delany House and Weaver House will be used for the basis of design.

In September of 2016 the renovation of the Delany House at 210 North State Street was approved via COA 133-16-CA. Therefore, elevations and plans are used from the house in the planned restored condition for comparison to the proposed home on 1204 East Lane Street.

3.3 New Construction of Primary Buildings: Guidelines

.1 Site new construction to be congruous with surrounding historic buildings that contribute to the special character of the historic district in terms of setback, orientation, spacing, and distance from adjacent historic buildings.

Setbacks are within the existing range setbacks of the Delany House at 210 N State St. and the Weaver House at 1203 E Lane St which are the two historic homes in the immediate vicinity of the lot. Refer to the Neighborhood Block Plan for existing setbacks. Orientation will match these buildings as well as neighboring homes in the area.

.2 Design new construction so that the overall character of the site, site topography, character-defining site features, trees, and significant district vistas and views are retained.

The design and layout of the new home (including setbacks) is optimized to save existing trees and topography. There are two trees with a diameter greater than 8 inches that are very close to the middle of the new lot. These will have to be removed to make room for any new construction. In addition, there is a large oak south of the lot that will remain.

.3 Evaluate in advance and limit any disturbance to the site’s terrain during construction to minimize the possibility of destroying unknown archaeological resources.

Due to the relative flat topography of the new lot, minimal site grading is required, and only for the foundation of the house, garage and driveway.

.4 Protect large trees and other significant site features from immediate damage during construction and from delayed damage due to construction activities, such as loss of root area or compaction of the soil by equipment. It is especially critical to avoid compaction of the soil within the critical root zone.

A 14” cedar and 19” birch sit roughly in the center of the lot and will be removed. A 26” oak exists south of the property line and will be remain. A tree protection plan for information regarding this tree will be provided. The remaining vegetation on the site are small trees (less than 8” diameter) and brush that will be cleared.

.5 It is appropriate to implement a tree protection plan prior to the commencement of construction activities.

.6 Conform to the design guidelines found in Section 1 regarding site and setting in developing a proposed site plan. Our proposed site plan will meet the guidelines found in section #1.

.7 Design new buildings to be congruous with surrounding buildings that contribute to the special character of the historic district in terms of height, form, size, scale, massing, proportion, architectural style, and roof shape. The height of new buildings should generally fall within 10 percent of well-related nearby buildings.

The proposed new house is similar in height to both the Delany House and Weaver House. The Delany House is a 1-1/2 story built with a walkout basement. Because of the topography of the lot and the walkout basement, the height of the roof from grade varies between 17’ on the N. State St side and 26’ on the E Lane St side. The Weaver House is a 2 story with a currently unknown height, but taller than the Delaney House.

.8 Design the proportion of the proposed new building’s front facade to be compatible with the front facade proportion of surrounding historic buildings.

As stated above, the front façade of the proposed home is designed to mirror both neighboring historic homes which primarily define the neighborhood character.

.9 Design the spacing, placement, scale, orientation, proportion, and size of window and door openings in proposed new construction to be compatible with the surrounding buildings that contribute to the special character of the historic district.

Windows of both historic buildings are generally vertically oriented, some grouped in clusters and others are spaced individually. Both historic buildings have a cluster of 3 vertical windows on the front façades that is mirrored on the proposed home. Front doors are of similar sizes decorated with smaller transom windows bordering the door. Windows (wood or Aluminum clad construction) will be single hung with similar grills to mirror the Delany house. Refer to the Building Comparisons for more information.

.10 Select materials and finishes for proposed new buildings that are compatible with historic materials and finishes found in the surrounding buildings that contribute to the special character of the historic district.

The Delany House currently has vinyl siding over the original siding. Our plan proposes a fiber cement siding with 8” reveal and smooth finish. Corner boards and facia will also be composite and smooth finish. The Delany house has a brick foundation and a shingle roof as will ours.

.11 Design new buildings so that they are compatible with but discernible from contributing buildings in the district.
The mass and form of the proposed site is compatible with both neighboring historic landmarks by utilizing their craftsman features in the open porch with wood columns, brick foundations, roof style and horizontal composite siding. The historic buildings are still discernible by each building’s unique features.

It is not appropriate to introduce new buildings whose proportion of built mass to open space on their site significantly varies from the surrounding buildings that contribute to the special character of the historic district. The proposed built area is 64.2% including decking, porches, driveway and garage. The Delany House built area will be roughly 42.4% after the subdivision of lots and the Weaver House is an estimated 36.7% built area.

The proposed one car garage will be in the eastern and south corner of the lot. The Delany House had a garage located on the east edge of the lot which was common for similar homes of the same era. Our original design incorporated the garage into the house with the garage door front facing which is a more suburban design, preferred and less expensive. However, after receiving feedback from the RHDC we revised our plan to include the detached garage as shown.

The garage will be constructed using the same materials as the home, all of which will be in compliance with the RHDC design guidelines as noted above.

The floor height of the deck will be approximately 30" form grade.

The construction of the deck will not require removal of any elements.

Ensure that new decks are sited and designed so they do not detract from the overall historic character of the building or the site.

The deck will be constructed of treated lumber and stained. Due to the size and proximity, it will not be seen and therefore does not detract from the character of the site.

Locate and construct decks so that the historic fabric of the structure and its character-defining features and details are not damaged or obscured. Install decks so that they are structurally self-supporting and may be removed in the future without damage to the historic structure.

Minimize the visibility of new residential decks from the street by introducing them in inconspicuous locations, usually on the building’s rear face and inset from the rear corners. Design and detail decks and associated railings and steps to reflect the materials, scale, and proportions of the building.

The deck will not be visible from the front or the street. The deck is a minimal size and does not significantly contribute to the massing or scale of the house.

In rare occasions where it is appropriate to site a deck in a location visible to the public right-of-way (i.e. the side of a building), it should be treated in a more formally architectural way. Careful attention should be paid to details and finishes, including painting or staining the deck’s rails and structural support elements in colors compatible with the colors of the building.

Align decks generally with the height of the building’s first-floor level. Visually tie the deck to the building by screening with compatible foundation materials such as skirt boards, lattice, masonry panels, and dense evergreen foundation plantings.

No impact to historic structures.

New garages and accessory buildings in locations compatible with the historic relationship of garages and accessory buildings to the main structure and the site in the district.

The garage will be constructed using the same materials as the home, all of which will be in compliance with the RHDC design guidelines as noted above.

It is appropriate to implement a tree protection plan prior to the commencement of construction activities.

See included tree protection plan.

1.4 Fences and Walls: Guidelines

Introduce compatible new fences and walls constructed of traditional materials only in locations and configurations that are characteristic of the historic district. Keep the height of new fences and walls consistent with the height of traditional fences and walls in the district or landmark.

A 6’ high wood privacy fence will be used to enclose the rear of the lot. Materials and height are selected to match examples in the Oakwood neighborhood and the immediate surrounding area. See example images attached.

1.6 Garages and Accessory Structures: Guidelines

Locate and orient new garages and accessory buildings in locations compatible with the historic relationship of garages and accessory buildings to the main structure and the site in the district.

The garage will be selected to complement the craftsman style of the house. Windows will be of the same type and pattern as the house and noted above.

Locate new decks so they do not require removal of a significant building element or site feature such as a porch or a mature tree.

No impact to historic structures.

The garage will be constructed using the same materials as the home, all of which will be in compliance with the RHDC design guidelines as noted above.

Select windows and doors for new garages and accessory buildings that are compatible in material, subdivision, proportion, pattern, and detail with the windows and doors of the principal structure or other historic garages and accessory buildings in the district.

The garage door will be selected to complement the craftsman style of the house. Windows will be of the same type and pattern as the house and noted above.
