Certificate of Appropriateness Placard

for Raleigh Historic Resources

Project Description:
Install storm windows and storm doors

404 Elm St
Address
Oakwood
Historic District

Historic Property
COA-0158-2021
Certificate Number

10/4/2021
Date of Issue

4/4/2022
Expiration Date

This card must be kept posted in a location within public view until all phases of the described project are complete. The work must conform with the code of the City of Raleigh and laws of the state of North Carolina. When your project is complete, you are required to ask for a final zoning inspection in a historic district area. Telephone the RHDC office at 832-7238 and commission staff will coordinate the inspection with the inspections Department. If you do not call for this final inspection, your Certificate of Appropriateness is null and void.

Signature, Collette R. K.
Raleigh Historic Development Commission

Pending the resolution of appeals, commencement of work is at your own risk.

**Minor Work Approval (office use only)**

Upon being signed and dated below by the Planning Director or designee, this application becomes the Minor Work Certificate of Appropriateness. It is valid until 04/04/2022. Please post the enclosed placard form of the certificate as indicated at the bottom of the card. Issuance of a Minor Work Certificate shall not relieve the applicant, contractor, tenant, or property owner from obtaining any other permit required by City Code or any law. Minor Works are subject to an appeals period of 30 days from the date of approval.

Additional information for Minor Work COA Application

This minor work application seeks a COA:

1) To install operable exterior storm windows with screens. For the windows in the original stucco part of the house that was constructed circa 1888, I seek approval to install Velv-A-Lume double hung, triple track storm windows (V3T Three Track Storm Window) manufactured by West Company in bronze. For the windows in the wooden clapboard addition that was added to the rear of the house in the 1950's, I seek approval to install Concord double hung, triple track storm windows manufactured by ProVia in rustic bronze. These storm windows and screens are to be installed by Pioneer Exteriors. I am working with Don Becom, Operations Manager (919-828-4405).

The use of two different manufacturers of storm windows is appropriate because the windows in the original stucco structure, the main part of the house, are substantially different from the windows in the back addition. The windows in the front and back are double hung windows with six over six divided panes in each the top and bottom window. There the similarity ends. Foremost, the windows are different in that the windows in the front stucco part of the house are original to the house. The back wooden clapboard part of the house was added in the 1950's to replace an original back porch and to convert the house from a single family home to one with four apartments. Further, the windows differ in overall dimensions and in the frames' style. The windows in the original stucco front of the house are 34” wide by 80” tall. The wood window frames are recessed into the stucco siding, are 1 3/4” wide, and have an arched detail over the top of the window. (The arch is only in the wood of the frame, not the glass panes.) The windows in the wooden clapboard addition in the rear of the house are 33” wide by 62” tall. The wood window frames are applied over the clapboard wood siding. The frames are 4 ½” wide, and they have no arch. These differences result in the overall effect of the windows in the front and back of the house being quite different. The widows in the front of the house appear to me as more elegant than those in the wooden addition. One can see these differences in the attached photos: Side, facing South and Side, facing North – 1. The original stucco front of the house has 10 windows; the wooden clapboard addition in the back has 17 windows. Selecting the Velv-A-Lume storm windows, widely recognized as the top aluminum storm window for an historic structure, is warranted for the main stucco structure constructed circa 1888. Selecting the ProVia storm windows for the back wooden clapboard is appropriate for an addition built in the 1950's and would result in a welcome cost savings. The differences in the storm windows would not be readily noticeable.

Currently, the window frames of the windows in the original stucco part of the house are painted a dark color, and the window frames of the windows in the wooden clapboard addition are painted a much lighter color. This could change over time. The colors of the two different types of storm windows for this COA Application are almost identical.

2) To install custom made storm doors for the three French doors that open onto the wrap-around front porch. Two of the French doors open onto the front porch that faces Elm Street and one is around the wrap of the porch that faces Oakwood Avenue. When I bought this property, the French door that faces Oakwood Avenue still had its original screen door. It has since been restored. See Photo Original screen door – 1 and Original screen door – 2. Please note that the screen for the transom is fixed and has a separate wooden frame that is in the same plane as the screen door when it is closed. I seek approval to use this single screen door to serve as the pattern for the storm door for it and for the other two identical French doors. Also, I seek approval to use it as the pattern for a screen door and a storm door for the back door and its
transom and for the storm door for the front door of the basement level Apartment that faces Oakwood Avenue. The photo Apt. front door shows it has no transom. These storm doors are to be painted to match the original screen door: Sherwin Williams Endurance exterior acrylic paint in the color green black. Lastly, I seek approval to add custom wooden storm windows to two windows in this same apartment: see photos Apt. South side window and Apt. East back window. The former window faces Oakwood Avenue, and the latter faces the back yard. Both of these windows open to the outside.

I welcome staff input on these storm doors, storm windows for the basement level apartment, and for suggestions on how to improve the weatherization of the double wood-paneled front door. If the front door cannot be adequately weatherized with weatherstripping or any other additional means, I seek staff input on what storm door style is appropriate to use for a custom storm door.
Velv-A-Lume

The Invisible Storm Window

West Window Corporation
Since 1949
VELV-A-LUME Historical Storm Windows have been used to solve difficult window situations for many years in both residential and commercial buildings. With historic renovations on the rise all across the nation, there is a need for a storm window that will provide protection to the original windows as well as increase their thermal efficiency – without changing the historic look. Designed and produced with this exact purpose in mind, the VELV-A-LUME is the perfect solution for many historic window projects.

The combination of strong tubular aluminum extrusions, tongue and groove sash seal, and close tolerances between sash and frame make the VELV-A-LUME Storm Window a serious performer. As a result, VELV-A-LUME Storm Windows have been installed in many state, local, and federal projects, including office buildings, colleges, police barracks, highway department buildings, and hospitals, as well as veterans administration and military reservation facilities. Available as both an outside or inside mount window, the VELV-A-LUME has been installed on numerous warehouse or factory to loft-style apartment conversion projects with great success.

In many historic renovations, existing architectural details such as windows must be preserved due to restrictions and guidelines enacted by localities. The VELV-A-LUME Storm Window has been used extensively in these situations. Designed to fit flush within the existing window opening, it’s often difficult to detect that a storm window has been installed. VELV-A-LUME Storm Windows are butt construction, expander style windows. An expander window is unique in that it can be fitted into a window opening that is out of square and still fit perfectly, allowing the sash and frame to remain square and operate with ease. A unique receptor system is also available for masonry openings, as well as radius top fixed windows to fit many openings. VELV-A-LUME…the ideal choice for “invisible” protection.

KEY

1. Sill Main Frame
2. Lower Sash Frame — Tubular Extrusion
3. Upper Sash Frame — Tubular Extrusion
4. Insect Screen Frame — Tubular Extrusion
5. Frame Jamb
6. Glazing Vinyl
7. Aluminum Insect Screen — (Fiberglass Optional)
8. Lower Screen Frame - Tubular Extrusion
10. Screen Latch Handle — Stainless Steel
11. Sash Interlock
12. Tongue and Groove Type Seal
13. Screen Track with Latch Lip

Corner section of main frame of storm window, showing both top and bottom sash and screen, each in separate tracks.

(Note: all screen rails and bottom of both insert rails are tubular extrusions to assure more strength and rigidity.)

Both sash are glazed with wrap-around vinyl for easier repair and strength. Special corners are used to eliminate dimples and staking marks.

Radius top Removable Panel Fixed Units shown in Tan on the Rockefeller Norfolk Luxury Apartments, Norfolk, Virginia. The VELV-A-LUME storm window is a great performer in both commercial and residential applications.

- Flush mounting for non-obtrusive appearance
- Expander type frame for a perfect fit in almost any opening
- Most fasteners are concealed by the expanders for a clean installed look
- Wide fingertip operated sash latches for easy operation
- Tubular extruded T6063-T6 aluminum for exceptional strength and long service life
- Interlocking sash and screen with tongue and groove seal at bottom for remarkable resistance to the elements
- Electrostatically applied polyester resin paint finishes provide long lasting service
V3T Three Track Storm Window

Standard Features
- Flush mount expander style Storm Window
- T-6063 Aluminum Extrusions, .050" walls in main frame, .0465" walls in sash profiles
- 1" Expanders on jambs, 7/8" Expander on head
- Sashes and screen are side-loaded into the frame for outstanding structural strength.
- Wide fingertip operated zinc die-cast sash slide bolts
- Sash corners are securely fastened with internal self-locking zinc die-cast corner gussets - no exposed fasteners
- Extruded full-width aluminum interlock at meeting rail
- Extruded tongue and groove sash to frame closure at frame sill for improved structure, air performance, and water control.
- Both sashes are channel glazed using a flexible vinyl glazing gasket and can be re-glazed if necessary.
- When ventilating with bottom sash fully raised, the screen interlocks with the sash for improved insect control (unless meeting rail is moved from the standard location).
- Architectural paint finish meets AAMA 2603.
  Colors available: White, Bronze, and Tan.

Optional Features
- Matching Picture Window (VPW)
- Radius Top Transom & Picture Window
- Numerous glazing options, Low-E, tempered glass
- Mullion for multiple units
- Receptor System for masonry openings
- Large Sill Expander for steeply sloped sills
- Beveled Side Expander for shallow openings
- Exterior or Interior mounting

ALUMINUM STORM WINDOWS

ARCHITECTURAL INTEGRITY AND PROTECTION
STORM WINDOW ADVANTAGES

Maintenance Free
Weather Protection
Reduce Outside Noise
Protect Original Windows
Easy to Install - No Mess!*

WHY CHOOSE ALUMINUM STORM WINDOWS?

Custom-built to your exact specifications

Constructed of heavy-duty, extruded aluminum for long life and structural integrity

Creates a dead air space that helps block energy transfer

Complement your home with one of 17 colors

Low-E and other glass options available

Lifetime Limited Transferable Warranty

* The basic installation of ProVia Storm Windows is excluded by definition from the U.S. EPA Lead-Based Repair, Replace and Painting Program (RRP Rule).
Shown: Mountain Berry Storm Windows
WHY CHOOSE **LOW-E GLASS** FOR YOUR WINDOW

**Save Money and get Quick Payback!**

Over 800,000 homes annually have storm windows installed\(^1\), with virtually all having clear uncoated glass, reducing the heating load by only 13% with a 10 year simple payback\(^2\).

In a Chicago study, Low-E storm windows showed marked improvement over the clear glass benefits amounting to an average of 21% heat load reduction and an average payback of 4.5 years\(^2\).

- Cost-effective alternative to total window replacement
- Warmer in winter; average of 21% heat load reduction\(^2\)
- Cooler in summer; reduces solar heat gain
- Reduces air infiltration

---

**Storm windows are designed to be installed over existing windows having sloped sills and are not intended to be used as a primary window. Regardless of application, product warranty does not cover issues such as leaking and condensation.**

---

**DOUBLE HUNG**

**Town & Country**

- Triple Track Operation with Inside Operating Half Screen
- Double Track Operation with Screen Under Exterior Sash
- Mitered Frame Corners with Contoured Master Frame
- Full Perimeter Black Vinyl Frame Liner
- Mid-Window Stabilizer Bar
- Removable Tilt In Sashes and Half Screen
- Ratcheted Sash Stops every 1 5/8” on Top and Bottom Sashes
- Coated Springs and Polymer Constructed Latch Bolts

Mitered frame corners provide superior strength and beauty. For extra elegance we have a contoured master frame.

**Concord**

- Triple Track Operation with Inside Operating Half Screen
- Double Track Operation with Screen Under Exterior Sash
- Butted Frame Corners and Contemporary Look
- Optional External Full Screen
- Full Perimeter Weatherstripping
- Mid-Window Stabilizer Bar
- Removable Tilt-In Sashes and Half Screen
- Ratcheted Sash Stops every 1 5/8” on Top and Bottom Sashes

Butted frame corners give this window exceptional strength. The square frame also creates a clean contemporary look.

ADD EXTRA PRIVACY AND TINT TO YOUR WINDOW

Privacy Options
Choose from Obscure Pebble or Gluechip glass if you need light to filter in, yet want to maintain privacy.

**OBSCURE PEBBLE**

**GLUECHIP**

Actual privacy levels will vary depending on your distance from the glass and also the amount of light in the room in comparison to the light outside your home. Privacy glass is not available for shaped storm windows.

Tint Options
Tinted glass can help reduce UV transmittance, solar heat gain and glare. Tinted glass options can give a room a whole new look, providing its own unique set of benefits. Be sure to choose the right one for your home.

**Gray Tint**
- Excellent glare control
- Exceptional protection against interior fabric and color fading
- Ultraviolet light protection

**Bronze Tint**
- High visible light transmittance
- Warm glow to interior décors
- Complements brick and stone
- Ultraviolet light protection

**Green Tint**
- Subdudes interior brightness
- High visible light transmittance

**Blue Tint**
- Low shading coefficient
- High visible light transmittance
- Solar performance (reduces solar heat gain)

Additional Glass Options
Single glazed clear glass available in single strength and double strength.
Low-E and tempered glass options available.

⅛" Acrylic available in place of glass.
“To serve, by caring for details in ways others won’t.” It’s not just our mission, but a way of letting our light shine every day at ProVia®. We continually strive to put these words into action by providing unmatched quality and service. The P-icon symbolizes each employee’s commitment to devoting the utmost care, pride and quality into each building product we manufacture…it’s The Professional Way.
