

WAKE BRT: NORTHERN CORRIDOR

What is the Northern Corridor Major Investment Study (MIS)?

North Raleigh has experienced significant growth over the past several years. What is certain is that the population and employment growth in the area will bring more traffic delays and congestion. To prepare and foster that growth, the City plans to implement two BRT routes or BRT-type services to provide a fast, reliable transit option for the growing region. The Northern Corridor MIS will analyze alternatives and high-capacity transit investments to connect Downtown Raleigh to Triangle Town Center and Midtown.

MIS Evaluation Process

- Start - Review prior plans and candidate alignments
- Fatal flaw analysis
- Evaluation of initial alignments
- Community/stakeholder input (Spring-Summer 2023)
- Detailed evaluation of refined/remaining alignments
- Community/stakeholder update (Fall 2023)
- Result - Locally Preferred Alternative (LPA) for Midtown and Triangle Town Center

What is Bus Rapid Transit?

Bus Rapid Transit, or BRT, is a type of fast, modern transit line. BRT systems have frequent service, with vehicles arriving frequently during peak hours. High frequency will mean short wait time and great reliability – if you miss a bus, your next ride is never far behind!
