

City of Raleigh Stormwater Inspections Group Contacts

Your stormwater inspection needs are handled by a team of inspectors. The city is divided into two regions and each region has a team of 2-3 inspectors who provide customer service throughout the region. Should you have a concern, you can contact any of the inspectors in your region. To set up a pre-construction meeting you can contact the Regional Coordinator (RC) for the respective region your project is located. In addition to regional inspectors we have a team of 2 inspectors that handle all single-family lot inspections throughout the entire City. All inspectors will perform scheduled and routine inspections on your project and will have access to all project information on file. You may always contact the Stormwater Inspections Manager, Lauren Witherspoon [(919) 996-3505].
