

# PLEASANT VALLEY ROAD WIDENING PROJECT

## PUBLIC MEETING

### MARCH 15, 2018

### Project Description & Purpose

The City has proposed roadway improvements along Pleasant Valley Road between Duraleigh Road and Glenwood Avenue. The proposed improvements include rehabilitating the existing pavement and widening to add a center turn lane, bicycle lanes, and sidewalks.

The properties alongside Pleasant Valley Road feature exclusively retail and commercial uses. However, there are multifamily residential developments along Duraleigh Road that will benefit from the pedestrian connectivity to Glenwood. This street has heavy wear and tear and is in need of an upgrade in order to handle vehicle traffic and heavy industrial use. The proposed sidewalks would facilitate improved access to transit as Go Raleigh Route #6 is located at either end of this project.

▶ **Right:** Proposed rendering of Pleasant Valley Road looking East

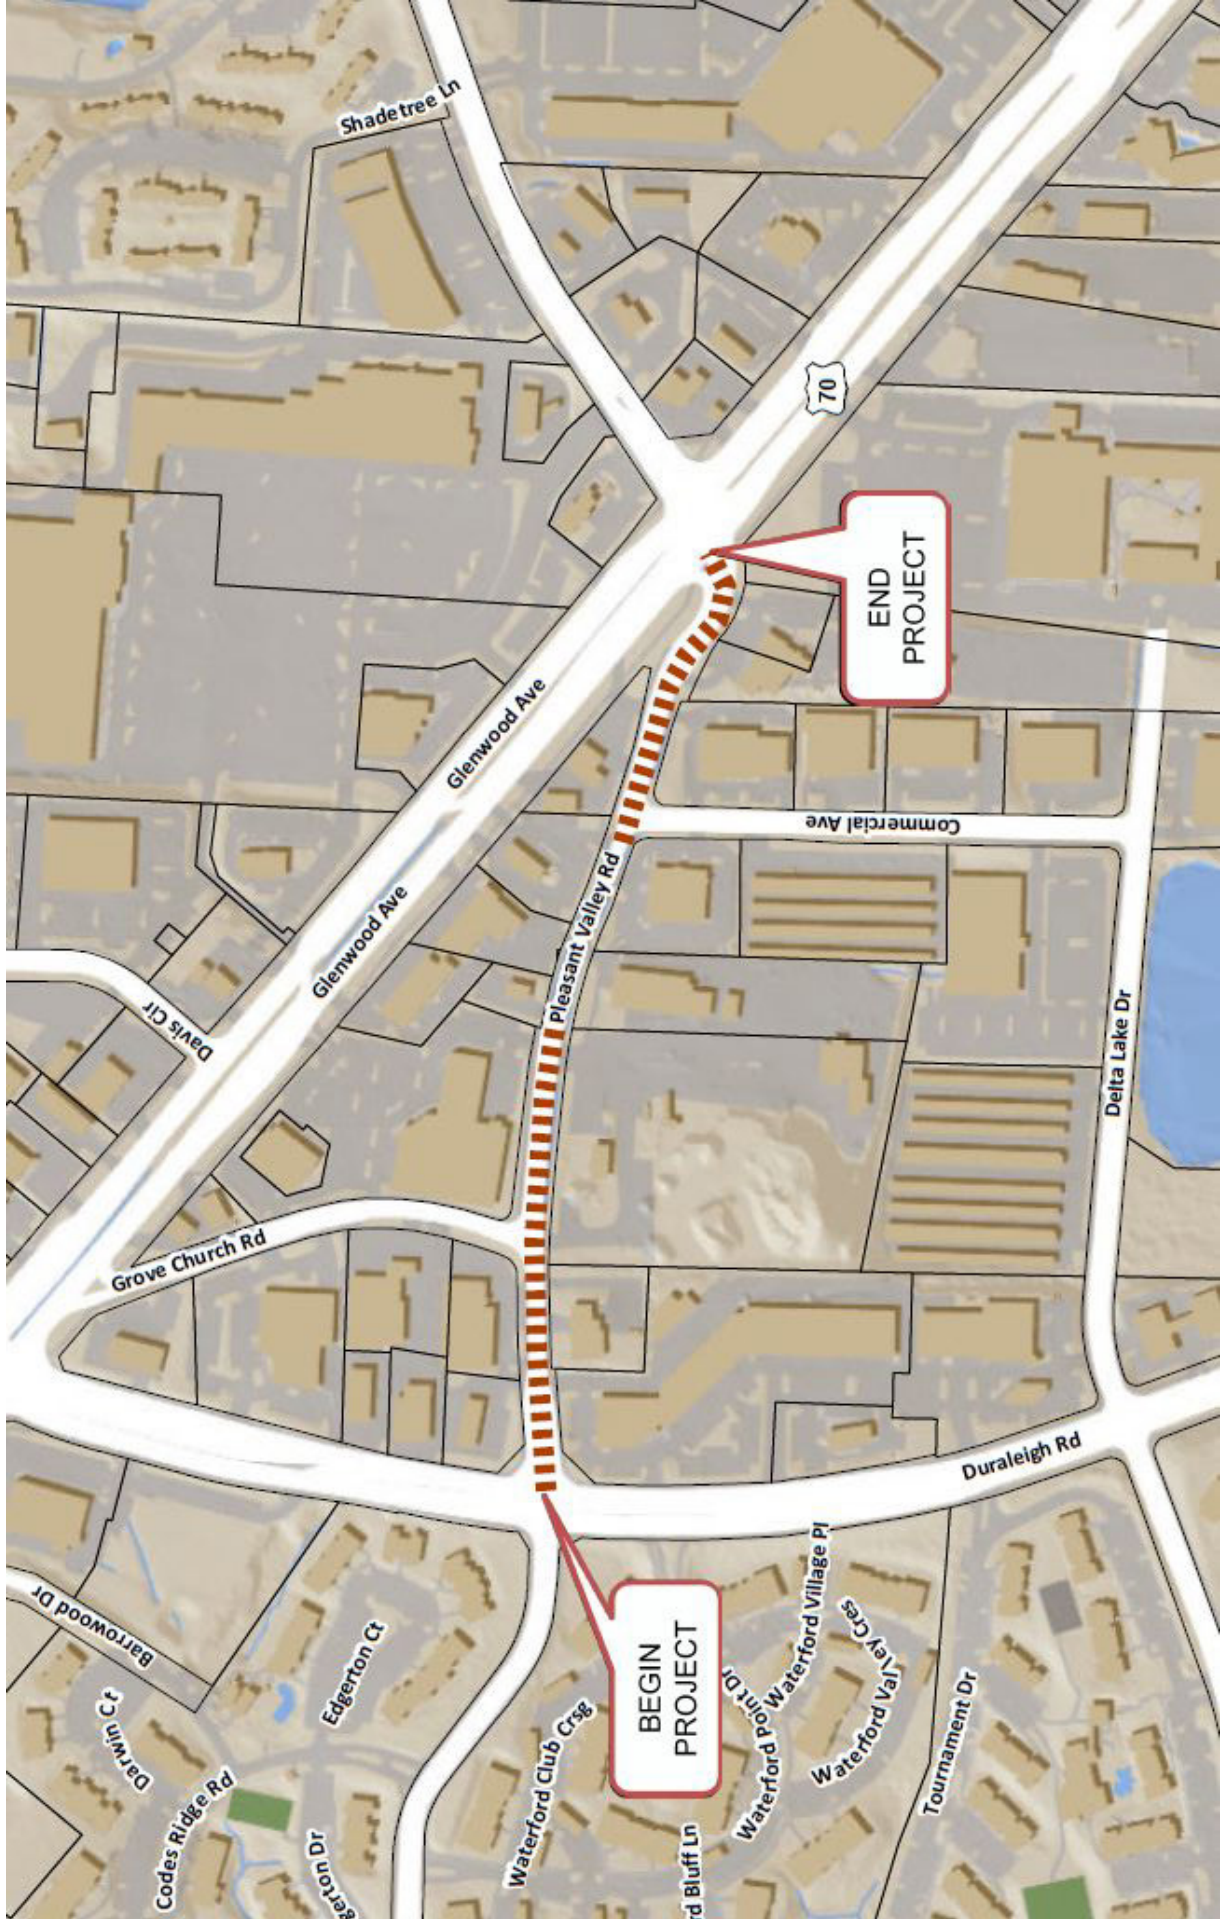

◀ Improvements along Pleasant Valley Road also involves landscaping enhancements including planting street trees and selecting plants that foster design cohesion and uniformity.

# PLEASANT VALLEY ROAD WIDENING PROJECT LOCATION

## Why is the Project Needed?

The existing pavement along Pleasant Valley Road is in poor condition. Additionally, operational improvements including bike and pedestrian access are needed.

The purpose of the project is to rehabilitate the pavement, improve traffic operations, and provide connectivity for pedestrians and bicyclists.

## How is the Project Going to be Built?

When the project is ready for construction, the contractor will use temporary lane closures along sections of Pleasant Valley Road, Commercial Avenue, and Delta Lake Drive to rebuild the pavement while still providing traffic accessibility.

Along a small section of Pleasant Valley Road, the contractor will be temporarily closing the road and rerouting traffic along Grove Church Road and Commercial Avenue. Local businesses will still have access along Glenwood Avenue. This will allow for construction to be completed quicker and safer.
