Dear Residential Customer,

If you wish to deactivate your branched irrigation system, the unions on the riser/standpipes must be permanently capped. Homeowners may complete this work, or they may hire a licensed professional qualified to work on residential water services.

At the completion of the required work, the property owner must submit a completed Deactivated Branched Irrigation System form as well as pictures of the completed work or copy of invoice showing work was completed by a licensed professional to the Cross Connection Program. (cross.connection@raleighnc.gov) Upon inspection and/or approval by the Raleigh Director of Public Utilities or his designee, the account will be marked inactive, and testing will not be required until the system is brought back into service. Upon reactivating the irrigation system, the owner must immediately notify the City of Raleigh's Cross Connection Program and hire a Certified Tester to test the approved backflow assembly and submit the report online. Please feel free to contact the Cross Connection Program with any questions you may have about this process.

DEACTIVATION OF IRRIGATION SYSTEM

This form is to affirm that my irrigation system on the City of Raleigh's public water supply has been deactivated. The City of Raleigh shall not be held liable for any cause, for failure to detect any facility or residence that has not properly deactivated irrigation lines from the public water supply nor shall this letter diminish the responsibility of any property owner from whose property a contamination of the public water supply may originate.

Owner:_____

Address:_____
